Program 2 variables
(declare in main):

char again = 'y';

double check = 650.00;
double sav = 800.00;
double cred = -700.00;

char account = 's';
int choice = 1;

Address (location in memory)	value	main variable	User defined function variable (pass by reference)
&again againPtr	'y'	again	*againPtr
&check moneyPtr	650.00	check	*moneyPtr
&sav moneyptr	800.00	sav	*moneyPtr
&credit moneyPtr	-700.00	cred	*moneyPtr
&account accountPtr	's'	account	*accountPtr
&choice choicePtr	1	choice	*choicePtr
